# Dahlias

I have a fine collection of these summer blooming bulbs, over two hundred varieties. They are easy of culture, and prefer light loam, well dressed and cultivated. Dormant bulbs may be planted from May 1st to June 15th in this climate. Plant three to four feet apart, three to four inches deep; lay the bulb down, instead of planting in an upright position with the sprout near top of the ground, as many amateur growers practice. The majority of failures to start the Dahlia into growth, comes from wrong planting methods. Give good culture the first part of season, and sprinkle ashes on the plants when the dew is on in the morning, especially after plants are one foot in height and they will flower freely. Double Dahlias are classed as Show, Fancy, Cactus, Decorative, Pompon, Paeony Flowered or Art Dahlias, Single, Collarette, etc., according to form, size or coloring of flower.

## Show Dahlias

These are large, compact, double to the center, very regular in outline, and in many varieties; the petals reflex to the stem forming a perfect ball. The flowers are either solid self-colored, or tipped and shaded darker than ground color.
